

Network Repurposing: Stable Core with Flexible International Engagement

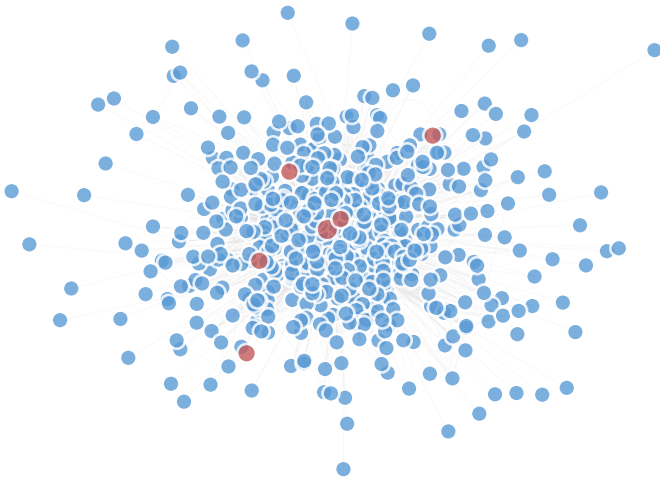

Pre-Crimea
(2012-2014)

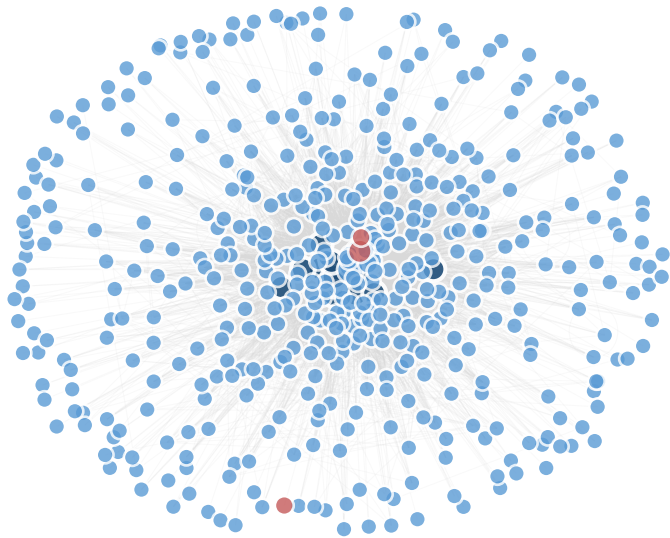

Post-Crimea
(2014-2020)

COVID-19
(2020-2022)

War Period
(2022-2024)

Network Statistics

Pre-Crimea:

Total: 626 nodes
Core: 15
Domestic: 605
International: 6

Post-Crimea:

Total: 911 nodes
Core: 15
Domestic: 879
International: 17

COVID-19:

Total: 658 nodes
Core: 14
Domestic: 638
International: 6

War Period:

Total: 494 nodes
Core: 14
Domestic: 477
International: 3

Key Findings:

- Stable core persists across all periods
- International partners adapt to geopolitical context
- Network repurposing enables strategic flexibility

Node size reflects network centrality. The visualization shows the entire network structure, demonstrating how the stable domestic core enables flexible international engagement.

● Stable Core ● Domestic Network ● International Partners
